reconciliation loop: at most 2 rounds
Oblique orthophoto
N, E, S, W; 5 cm pixel
BDOT10k + LiDAR
footprint, function, storeys, state, height
code
Building card
views, rectified facades, record, rubric result
LLM
Balancing agent
diagnoses cells, asks the witness
code
Cell balance
flags ratio > 1.5 and at least 25 people
NSP 2021 grid
registered residents per 125 m cell (lower bound)
VLM
Visual witness
type, state, residential share, density
code
Estimator
rubric × share × density
Building estimate
one row per building
LLM
Search agent
web search: beds or flats of the largest buildings
code
Rubric
fixed values from the literature
Evaluation
SRLM regions, once at the end
VLM: reads images
LLM: no images
deterministic code
question and answer
